

2019 Annual Statement by the Infection Prevention and Control (IPC) Lead

We have been working together to provide our patients with the best level of infection control measures.

To my knowledge, following a comprehensive audit there have been no infection transmission incidents for any action to be taken in the last year. The practice has an incident reporting procedure in place should there be an incident in the future.

We have been working round all the consulting room to maintain the high level of cleanliness, and have plans in place to improve the rooms. The rooms themselves are being maintained to the standard expected in a General Practice surgery, and we are actively monitoring rooms on a weekly basic.

In order to maintain our high standards, staff attend in house aseptic and hand hygiene courses.

Please feel free to offer comments and feedback regarding this matter.
